CLAIMS

I claim:

5

- 1. A composition comprising a colloid particle comprising at least one electron transfer moiety (ETM).
- 2. A composition according to claim 1 wherein said particle further comprising a self-assembled monolayer (SAM).
- 3. A composition according to claim 1 wherein said colloid further comprises at least one covalently attached nucleic acid.
 - 4. A composition comprising a colloid particle comprising a covalently attached conductive oligomer.
 - 5. A composition according to claim 4 wherein said colloid particle further comprises at one ETM.
 - 6. A composition comprising a colloid particle comprising:
 - a) a SAM;
 - b) a capture probe;
 - c) an amplification sequence; and
 - d) a label probe hybridized to said amplification sequence, wherein said label probe comprises at least one covalently attached ETM.
